This is the last example of a BHL file converted into HTML, L<sup>A</sup>T<sub>E</sub>X and SGML formats. This example shows you the various syntactic rules that BHL handles. For further details, please refer to the *manual* of the BHL mode<sup>1</sup>.

The homepage of BHL is <http://bhl.mode.free.fr>.

## 1 Fonts and environments

### 1.1 Using font beautifiers

Here is a list of the different fonts beautifiers that you can use inside the BHL mode<sup>2</sup>.

**Bold** one or two words.

**Emphasis** *one or two words*.

**TrueType** one or two words.

**Underline** one or two words.

**Bold italic** *one or two words*

### 1.2 Environments

BHL handles two specific environments: verbatim and minipage.

Verbatim:

```
Here is a part of text that          will be displayed
in      verbatim
```

A minipage:

This minipage (12cm) is centered without border. This minipage (12cm) is centered without border. This minipage (12cm) is centered without border.

---

<sup>1</sup>Note that you can insert and convert footnotes. Nice, isn't it?

<sup>2</sup>I don't know why, but footnotes make me happy.

This minipage (10cm) is put on the left without border.

This minipage (10cm) is put on the left without border.

This minipage (10cm) is put on the left without border.

This minipage (8cm) is put on the right with border. This minipage (8cm) is put on the right with border. This minipage (8cm) is put on the right with border.
--

A horizontal rule:

Another horizontal rule, put on the right:

## 2 Converting lists

### 2.1 Ordered and non-ordered lists

Ordered lists begin with three whitespaces, a list separator (\* or -) and another whitespace.

- Like this;
- or like that.

### 2.2 Description lists

Description lists are treated like other lists, except that they cannot be nested in other lists.

A description item consists in three whitespaces, two dashes and a whitespace.

**Term** a definition of the terme.

**Definition** another definition.

## 2.3 Nested lists

- Lists can be nested inside other lists.
  - You just need to add three whitespaces more.
  - These two items will be nested into two other items.
    1. Three levels of nested lists are supported.
    2. Four levels won't be very useful...
- Blank lines are not mandatory between items.

## 3 Converting tables

Here is a table:

BHL	Other tool
Free software	Free software?
With Emacs	Without Emacs

A table line begins and ends with a “—”. Other “—” inside a line of the table separate two cells. Asterisk means that the cells are the headers of the table.

## 4 The table of contents

You can *browse* the table of content, *insert* it inside your document, and *update* the numbering of sections.

Please feel free to submit bugs or ideas: BHL contact (`bhl.mode@free.fr`).
