Some Sugar python code

Some example code:

```
from TextWidget import TextWidget
from sugar.graphics.notebook import Notebook
...
    top_container = Notebook()

    #Create pages for the notebook
    first_page = gtk.VBox()
    #Create a TextWidget object that can display
    #pango markup text and add it to the first page
    tw = TextWidget()
    first_page.pack_start(tw)

    second_page = gtk.VBox()
    third_page = gtk.Frame()

    #Add the pages to the notebook.
    top_container.add_page('First Page', first_page)
    top_container.add_page('Second Page', second_page)
    top_container.add_page('Third Page', third_page)
    return top_container
```
